

Customer Journey Map

Date	30 June 2026
Team ID	
Project Name	Voice based concept understanding analyser
Maximum Marks	2 Marks

Customer Journey Map Overview

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage. This mapping strategy guides cross-functional technical teams to identify functional boundaries, backend bottlenecks, and system optimization layers required to build an intuitive voice analysis framework.

Journey Map Matrix — Core Experience (Part 1)

Phase of Journey	STAGE 1: ONBOARDING	STAGE 2: VOICE ANALYSIS	STAGE 3: INSIGHTS
Actions <i>What does the customer do at this step?</i>	• Launches the core platform via web application. • Selects an academic or technical subject from the curated knowledge hub. • Initiates the peripheral audio setup assistant to configure microphone access.	• Reads the displayed conceptual prompt or exam question. • Speaks aloud to articulate an explanation in their own native phrasing. • Concludes and uploads the processed audio capture stream.	• Reviews the real-time generated semantic scoring rubric checklist. • Examines the interactive color-coded canvas outlining target concept gaps. • Downloads or bookmarks the comprehensive competency scorecard.
Touchpoint <i>What part of the service do they interact with?</i>	• Primary Onboarding Dashboard UI. • Topic selection node dropdown. • Browser microphonic permission prompts and device wizard.	• Voice recording module interface. • Dynamic visual audio waveform indicator. • Backend ingestion loading sequence panel.	• Interactive multi-axis analytical dashboard. • Visual knowledge graph visualization maps. • Actionable text correction overlays.
Customer Thought <i>What is the customer thinking?</i>	• "I hope this matches my current university syllabus." • "The workspace layout looks clean and easy to configure."	• "Is the engine adapting to my accent correctly?" • "Did I state all the mandatory core technical definitions?"	• "Wow, it instantly flagged the precise sub-topic I missed!" • "This breakdown helps me study much more efficiently."

Journey Map Matrix — Operational Alignment (Part 2)

Phase of Journey	STAGE 1: ONBOARDING	STAGE 2: VOICE ANALYSIS	STAGE 3: INSIGHTS
Customer Feeling <i>What is the customer feeling?</i>	Curious & Hopeful: Optimistic about alternative study techniques but slightly concerned with initial microphonic calibrations.	Highly Focused: Conscious of technical language usage; slightly anxious regarding recording timers.	Enlightened & Motivated: Relieved to get immediate non-judgmental evaluations, leaving them driven to clear out remaining flaws.
Process Ownership <i>Who is in the lead on this step?</i>	Frontend UI Team Responsible for seamless onboarding experiences and robust client-side device checks.	AI Core Engineers In charge of Whisper transcription accuracy, pipeline synchronization, and voice optimization models.	Data Analytics Lead Handles vector similarity computations and matches semantic concepts to generate visual metrics.
Opportunities <i>How can we optimize this stage?</i>	- Integrate smart interactive tooltips and mini interactive tutorials for newcomers. - Add automatic audio profile tuning to cancel passive background hums.	- Provide a real-time live textual streaming transcription box on-screen. - Introduce adaptive phonetic maps to better understand variations in accent.	- Link weak analytical points directly to targeted remedial learning pathways. - Provide one-click progression loops to instantly re-record and track improvements.
