

Empathy Map

Date	30 June 2026
Team ID	
Project Name	Voice based concept understanding analyser
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I wish there was an automatic tool that tells me if I am explaining this concept correctly." • "Is my spoken answer technically accurate, or am I just rambling?" • "Studying online is convenient, but I miss getting vocal feedback from instructors."	THINKS • He wonders if his conceptual knowledge has hidden gaps that won't show up on a standard MCQ quiz. • He thinks traditional text assessments take too long and don't evaluate communication skills. • He hopes the voice analyzer understands his accent without throwing errors.
PERSONA NAME (Independent Student / Technical Learner)	
DOES • Reads online articles, textbooks, or tutorials, and then tries to rephrase the ideas in his own words. • Records his voice or talks out loud to his room to practice complex explanations. • Manually looks up definitions in glossaries to double-check if he used the correct technical keywords.	FEELS • Frustrated by static grading systems that don't capture expressive verbal understanding. • Anxious about upcoming viva-voce examinations or conceptual job interviews. • Motivated when receiving immediate validation that his technical mastery is correct.
